High-Performance Ceramics

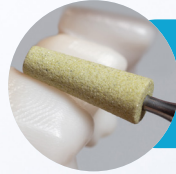

Shop Now

Trimming

DCBs

- Effectively, gently and intuitively trim high-performance ceramics
- Only light pressure needed due to interspersed diamonds and sintered ceramic bond

DCB3CA

Extended shapes and sizes now available!

ZR6881

ZR6805

ZR6801

Adjusting

ZR Diamonds

- Reduce material rapidly with little effort due to extremely durable diamonds
- Feature densely packed diamond layer with permanently bonded, high-quality diamond particles

Diamond Discs

6942

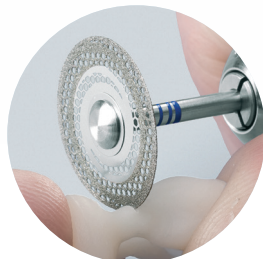

- Sintered disc used for separating ceramics
- Long service life due to diamond interspersed edge

6924

- Spiral reinforced disc
- Increases visibility when separating and contouring ceramics

6942

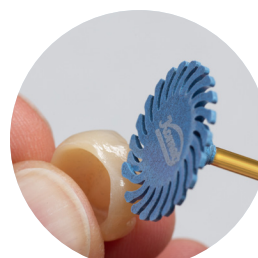

6924

Polishing

ZR Flash Polishers™

High performance, two-step polishers interspersed with diamonds.

- Spiral polishers: For occlusal surfaces
- Wheel polishers: For lingual or buccal mass polishing
- Flame polishers: For buccal polishing

94013F

94018C

Extra-Oral All-Ceramic Adjustment Kit

Comprehensive kit with coarse polishers to efficiently adjust and polish high-performance ceramics.

TD2926A

DCB4

Includes a diamond ceramic abrasive that proficiently cuts while generating minimal heat.

Acrylics/Resin

Separating

987P

- Large, serrated diamond disc used for separating resin models
- Can be used in a clockwise or counterclockwise rotation

Adjusting

Carbide Cutters

Coarse Toothing

- ACR toothing resists jamming and is easily controlled due to its staggered toothing, making it ideal for denture acrylics
- GSQ toothing provides easy and controlled surface shaping, effective cutting and optimal surface quality for soft and temporary acrylics

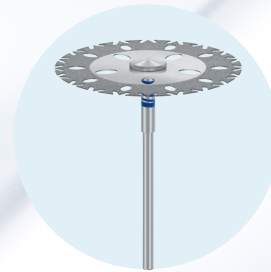

Medium Toothing

A universal cutter that works on every material!

- E toothing removes excessive material and trims acrylic gently with little pressure

Fine Toothing

- EF toothing provides super precise finishing and short granular chips ensure smooth cutting

H79EF

Polishing

9486

Abrasive buff embedded in silicone to prevent shedding while removing, rounding and smoothing plastics.

9489C/M

Coarse and fine grit polishers with improved durability for pre-polishing.

9644F

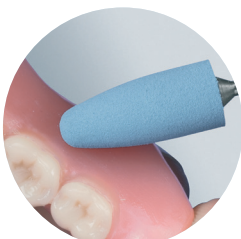

Used for high-shine polishing.

Brush Mop Polishers

- Coarse, medium and fine grits for polishing acrylics
- Used for smoothing, buffing or polishing specific spots on clear aligners that feel uncomfortable to patients

Stone and Model

Cutting/Separating

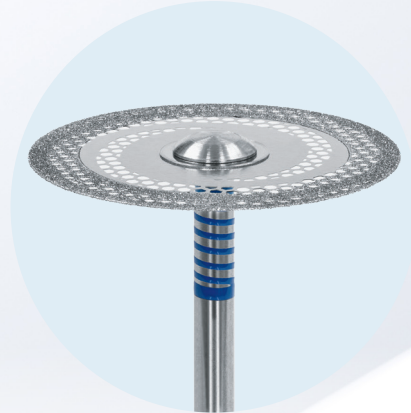

Shop Now

987P

- Serrated diamond disc used for cutting plaster models
- Can be used in clockwise or counter-clockwise rotation

6924

- Spiral reinforced disc that provides efficient material reduction and greater stability
- Features honeycomb design and extra-large chip spaces

Trimming/Shaping

Carbide Cutters

Coarse Toothing

- SGFA toothing reduces bulk material on wet plaster
- GEA toothing reduces bulk material on dry plaster

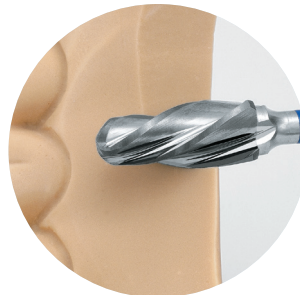

Medium Toothing

- E toothing removes excessive material and trims dry plaster

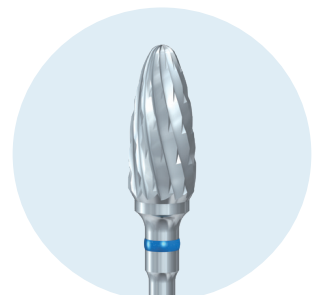

Features staggered toothing that divides the instrument blades into individual, offset cutting segments.

Fine Toothing

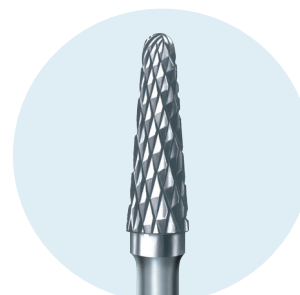

- EF toothing provides super-precise finishing and short granular chips ensure smooth cutting
